A YANG Data Model for OSPF Segment Routing for the MPLS Data Plane
draft-ietf-ospf-sr-yang-34

Commenté [MB1]: (TBC) Any Notifications or statistics to add?

Abstract

This document defines a YANG data module that can be used to
~~configure and manage~~ OSPF Extensions for Segment Routing for the MPLS
data plane.

Commenté [MB2]: Manage covers also configuration

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of BCP 78 and BCP 79.

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <https://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on 11 August 2025.

Appendix A. A Configuration Example	46
Authors' Addresses	48

1. Overview

This document defines a YANG data model [RFC7950] that can be used to ~~configure and manage Segment Routing (SR) for OSPFv2 extensions for Segment Routing~~ [RFC8665] and OSPFv3 ~~extensions for Segment Routing~~ [RFC8666] for the MPLS data plane. It is an augmentation to the OSPF YANG data model [RFC9129].

The YANG module in this document conforms to the Network Management Datastore Architecture (NMDA) [RFC8342].

1.1. Requirements Language

The key words "MUST", "MUST NOT", "REQUIRED", "SHALL", "SHALL NOT", "SHOULD", "SHOULD NOT", "RECOMMENDED", "NOT RECOMMENDED", "MAY", and "OPTIONAL" in this document are to be interpreted as described in BCP 14 [RFC2119] [RFC8174] when, and only when, they appear in all capitals, as shown here.

1.2. Tree Diagrams

This document uses the graphical representation of data models defined in [RFC8340].

2. OSPF Segment Routing

This document defines a model for ~~OSPF Segment RoutingSR Extensions extensions for~~ both OSPFv2 [RFC8665] and OSPFv3 [RFC8666]. ~~It is an augmentation of the OSPF base model.~~

The OSPF SR YANG module requires support for the base ~~segment routingSR~~ module [RFC9020], which defines the global ~~segment-routingSR configuration~~ independent of any specific routing protocol ~~configuration~~, and support of OSPF base model [RFC9129] which defines basic OSPF configuration and state.

`module: ietf-ospf-sr-mpls`

```
augment /rt:routing/rt:control-plane-protocols
  /rt:control-plane-protocol/ospf:ospf:
    +-rw segment-routing
    | +-rw enabled?    boolean
```

Commenté [MB3]: What is key is to list exceptions if any.

8407bis says:

«If the document contains major Network Management Datastore Architecture (NMDA) exceptions or include a temporary non-NMDA module [RFC8342], then the Introduction section should mention this fact with the reasoning that motivated that design. Refer to Section 4.23 for more NMDA-related guidance. Specifically, Section 4.23.2 includes a recommendation for designers to describe and justify any NMDA exceptions in detail as part of the module itself.»

Commenté [MB4]: I would expect a minimum of narrative text to explain the set of management function supported by the model. For example, I can't tell whether when can store the algo capabilities of adj SR routers, etc.

Commenté [MB5]: Already stated in the intro

Commenté [MB6]: Please move the full tree to an appendix but consider snippet to help readers go through the model.

Refer to 3.4 of 8407bis.

description
  "This YANG module defines the generic configuration
  and operational state for OSPF Segment Routing (SR), which
  is common across all of the vendor implementations. It is
  intended that the module will be extended by vendors to
  define vendor-specific OSPF Segment Routing configuration
  and operational parameters for the MPLS data plane.

  This YANG model conforms to the Network Management

```

Commenté [MB13]: How this was checked?

Can we map the current model to [Segment Routing Configuration Guide, Cisco IOS XE 17](#) | [Access and Edge Routers - Segment Routing Traffic Engineering With IS-IS \[Cisco IOS XE 17\] - Cisco](#) ? (picking a random SR OSPF implem).

**** More generally, on the example, Nokia/Juniper/ (including state)**

Figure 1

3. Security Considerations

The YANG module specified in this document define a schema for data that is designed to be accessed via network management protocols such as NETCONF [RFC6241] or RESTCONF [RFC8040]. The lowest NETCONF layer is the secure transport layer, and the mandatory-to-implement secure transport is Secure Shell (SSH) [RFC6242]. The lowest RESTCONF layer is HTTPS, and the mandatory-to-implement secure transport is TLS [RFC8446].

The NETCONF Configuration Access Control model (NACM) [RFC8341] provides the means to restrict access for particular NETCONF or RESTCONF users to a pre-configured subset of all available NETCONF or RESTCONF protocol operations and content.

Commenté [MB17]: Please use the updated template in 8407bis

There are a number of data nodes defined in the module that are writable/creatable/deletable (i.e., config true, which is the default). These data nodes may be considered sensitive or vulnerable in some network environments. Write operations (e.g., edit-config) to these data nodes without proper protection can have a negative effect on network operations. These are the subtrees and data nodes and their sensitivity/vulnerability:

/ospf:ospf/segment-routing/enabled - Modification to the enablement for SR could result in a Denial-of-Service (DoS) attack. If an attacker disables SR, it will cause traffic disruption.

Commenté [MB18]: How?

/ospf:ospf/segment-routing/bindings - Modification to the local bindings could result in a Denial-of-Service (DoS) attack.

Commenté [MB19]: Service disruption?

/ospf:ospf/protocol-srsgb - Modification of the protocol SRGB could be used to mount a DoS attack. For example, if the protocol SRGB size is reduced to a very small value, a lot of existing segments could no longer be installed leading to a traffic disruption.

/ospf:interfaces/ospf:interface/segment-routing - Modification of the Adjacency Segment Identifier (Adj-SID) could be used to mount a DoS attack. Change of an Adj-SID could be used to redirect traffic.

/ospf:interfaces/ospf:interface/ospf:fast-reroute/ti-lfa - Modification of the TI-LFA enablement could lead to traffic disruption.

Some of the readable data nodes in the module may be considered sensitive or vulnerable in some network environments. It is thus important to control read access (e.g., via get, get-config, or notification) to these data nodes.

The module "ietf-ospf-sr-mpls" augments base OSPF module data base with various TLVs. Knowledge of these data nodes can be used to attack other routers in the OSPF domain.

4. Acknowledgements

The authors wish to thank Dean Bogdanovic and Kiran Koushik Agrahara Sreenivasa for their YANG model discussions.

The authors wish to thank Yi Yang, Alexander Clemm, Gaurav Gupta, Ladislav Lhotka, Stephane Litkowski, Greg Hankins, Manish Gupta, Alan Davey, Divakaran Baskaran, Reshad Rahman, Tom Petch, and Corey Bonnell for their thorough reviews and helpful comments. The authors wish to thank Julien Meuric for a very meticulous Routing Directorate review.

Author affiliation with The MITRE Corporation is provided for identification purposes only, and is not intended to convey or imply MITRE's concurrence with, or support for, the positions, opinions or viewpoints expressed. MITRE has approved this document for Public Release, Distribution Unlimited, with Public Release Case Number

18-3281.

5. IANA Considerations

This document registers a URI in the IETF XML registry [RFC3688]. Following the format in [RFC3688], the following registration is requested to be made:

URI: urn:ietf:params:xml:ns:yang:ietf-ospf-sr-mpls
Registrant Contact: The IESG.
XML: N/A, the requested URI is an XML namespace.

This document registers a YANG module in the YANG Module Names registry [RFC6020].

name: ietf-ospf-sr-mpls
namespace: urn:ietf:params:xml:ns:yang:ietf-ospf-sr-mpls
prefix: ospf-sr-mpls
maintained by IANA? N

Appendix A. A Configuration Example

The following is an XML example using the OSPF SR YANG module, and RFC 9020.

Note: '\' line wrapping per [RFC8792].

```
<?xml version='1.0' encoding='UTF-8'?>
<routing xmlns="urn:ietf:params:xml:ns:yang:ietf-routing">
  <router-id>1.1.1.1</router-id>
  <control-plane-protocols>
    <control-plane-protocol>
      <type xmlns:ospf="urn:ietf:params:xml:ns:yang:ietf-ospf">\
ospf:ospfv2</type>
      <name>OSPFv2</name>
      <ospf xmlns="urn:ietf:params:xml:ns:yang:ietf-ospf">
        <areas>
          <area>
            <area-id>0.0.0.0</area-id>
            <interfaces>
              <interface>
                <name>eth0</name>
                <segment-routing xmlns="urn:ietf:params:xml:ns:\
:yang:ietf-ospf-sr-mpls">
                  <adjacency-sid>
                    <adj-sids>
                      <value>3888</value>
                    </adj-sids>
                  </adjacency-sid>
                </segment-routing>
              </interface>
            </interfaces>
          </area>
        </areas>
        <segment-routing xmlns="urn:ietf:params:xml:ns:yang:\
ietf-ospf-sr-mpls">
          <enabled>true</enabled>
        </segment-routing>
        <protocol-srgb xmlns="urn:ietf:params:xml:ns:yang:\
ietf-ospf-sr-mpls">
          <srgb>
            <lower-bound>4000</lower-bound>
            <upper-bound>5000</upper-bound>
          </srgb>
        </protocol-srgb>
      </ospf>
    </control-plane-protocol>
  </control-plane-protocols>
</routing>
```

The following is the same example using JSON format.

```
{
  "ietf-routing:routing": {
    "router-id": "1.1.1.1",
    "control-plane-protocols": {
```

Commenté [MB29]: What about reporting examples?

Commenté [MB30]: Do we really need to have this given that the JSON encoding for the same example is provided?

Commenté [MB31]: The prefix is missing

```
"control-plane-protocol": {
  "type": ""ietf-ospf:ospfv2"",
  "name": "OSPFv2",
  ""ietf-ospf:ospf": {
    "areas": {
      "area": {
        "area-id": "0.0.0.0",
        "interfaces": {
          "interface": {
            "name": "eth0",
            ""ietf-ospf-sr-mpls:segment-routing": {
              "adjacency-sid": {
                "adj-sids": {
                  "value": 3888
                }
              }
            }
          }
        }
      }
    }
  },
  ""ietf-ospf-sr-mpls:segment-routing": {
    "enabled": true
  },
  ""ietf-ospf-sr-mpls:protocol-srgb": {
    "srgb": {
      "lower-bound": 4000,
      "upper-bound": 5000
    }
  }
}
}
```

Commenté [MB32]: The prefix is missing

Commenté [MB33]: The prefix is missing

Commenté [MB34]: The prefix is missing
